Positioning (vs MSCI ACWI)

Market Outlook

MACROECONOMIC ENVIRONMENT	VALUATION	SENTIMENT
--	--	-

Even though economic growth for 2023 exceeded all expectations, particularly in the United States, our base case for 2024 continues to be a mild recession in the developed countries. The leading economic indicators, credit conditions and some coincident indicators continue to favour this scenario. A number of European countries are already in a technical recession, and Canada may have joined them in the fourth quarter. The real economy's response time to monetary tightening is not unusual, and the maximum impact of the rate hikes on economic activity and corporate earnings is yet to come. On the positive side, the deceleration in inflation seen in 2023 will continue this year, albeit at a more moderate pace because of slowing demand. We are maintaining a double-negative rating on the macro environment.

The starting point in 2024 for the S&P 500 and the NASDAQ is an extremely expensive valuation. The potential for surprises therefore looks asymmetrical: good news is already priced in, whereas bad news isn't. Outside the U.S., however, stock market valuations are more normal. Europe, Asia Pacific and emerging markets have valuations close to their historical medians. Mid and small caps already reflect an austere economic scenario (a lot of bad news is priced in). Our analysis of market valuations clearly shows that a defensive equity positioning is very cheap, whereas a pro-cyclical positioning has become very expensive. In an environment where the S&P 500 is in the most expensive decile of its historical distribution and because of its importance in the global market, we are maintaining a double-negative rating on valuation.

The Federal Reserve's change of tone fuelled a broadly based stock market surge at the end of the year. Our risk appetite metrics all jumped, as investors, worried about missing the boat, rushed to buy stocks with just weeks to go before year-end. As for insiders, they took the opportunity to sell shares. In a sign that the year-end rally was overdone, the various short-term sentiment metrics jumped into euphoria territory and the technical indicators quickly moved into overbought territory. The fact that low-quality stocks outperformed was also a sign of euphoria. Even so, given that the three- and six-month averages of our composite sentiment index are still neutral, we have lowered our investor sentiment vector only one notch to negative.

Our analysis of the three vectors has prompted us to maintain a defensive bias. We're concerned about the deteriorating economic growth outlook and its impact on corporate earnings at a time when market valuations and investor positioning are not indicative of a slowdown.

All-Country Equities

Summary

Benchmark	MSCI ACWI (net)
Value added objective	2% (4-year rolling periods)
Active risk	3% to 5%
Number of holdings	375 to 470
Currency management	Active
Maximum cash exposure	10%
